

Bulletin No. 4
September, October, November, December

This bulletin covers the fall and early winter seasons. One hundred and sixty-three species are here listed, of which ten are new for the year. The total number of species recorded by the Cleveland Bird Club in 1932 is two hundred and eleven.* It is hoped that as good a list may be obtained in 1933.

The following people contributed records to this bulletin:

John W. Aldrich	E. C. Hoffman
Robert L. Baird	S. Charles Kendeigh
Francis Gilliland	Margarette E. Morse
Arthur B. Williams	

The approximate number of trips taken by these observers during this period are:

September	- 38
October	- 39
November	- 26
December	- 19

The height of the fall migration southward this year seemed to come on October 7, 8 and 9 when unusually large numbers of kinglets, sparrows, warblers, and sapsuckers were recorded. The golden-crowned kinglet has been very common this fall, much more so than usual. It is interesting that the red-breasted nuthatch, which was very numerous in this region during the fall and winter months of 1930 and 1931, is not represented in this bulleting this year by a single record. Apparently the food crop in the north was sufficient this year not to necessitate the birds coming south to seek sustenance.
