

## FIELD OBSERVATIONS

**Fall Report: August-November 2012.**—This report consists of significant bird observations compiled by the Field Observations Committee (FOC). Electronic submissions to the FOC should be in the following format: species, number of individuals, age and sex of the bird(s), color morph if applicable, location (including county), date, observer(s), and significance. Seasons are winter (December-February), spring (March-May), summer (June-July), and fall (August-November). Submit observations to regional compilers within two weeks after the close of each season, or to the state compiler within one month. Addresses of the compilers follow this report.

Sight-only observations are considered “reports” while only those supported by verifiable evidence (photographs, video or audio recordings, or specimens) are called “records.” Species for which documentation is required by the FOC and by the FOS Records Committee (FOSRC; <fosbirds.org/official-florida-state-bird-list>) are marked here with an asterisk (\*). A county designation (in italics) accompanies the first-time listing of each site in this report. Abbreviations in this report are: AFB = Air Force Base, AFR = Air Force Range, EOS = end of season, NERR = National Estuarine Research Reserve, nm = nautical mile, NP = National Park, NS = National Seashore, NSRA = North Shore Restoration Area, NWR = National Wildlife Refuge, SF = State Forest, SP = State Park, STA = Stormwater Treatment Area, STF = sewage treatment facility, WMA = Wildlife Management Area, and N, S, E, W etc., for compass directions. Bold-faced entries denote birds newly reported or verified in Florida, or record numbers. Photographs or video- or audio-recordings archived by the FOC are identified by a plus (+); BPA catalog numbers are provided for the most significant of these.

### SUMMARY OF THE FALL SEASON

Although 2012 was an active tropical storm season, Florida was largely spared extensive damage. Tropical Storm *Debby*, which landed at Steinhatchee on 26 June, flooded considerable areas south to Pasco County, with maximum rainfall of 28.7 inches (73.1 cm) in Wakulla County. Hurricane *Isaac*, which made landfall in Louisiana on 28-29 August, also caused much flooding damage, primarily in the southern half of the Florida peninsula. *Isaac* brought unprecedented numbers of shearwaters into waters off the Pensacola area. The main avian story was the invasion of Red-breasted Nuthatches that reached into the central peninsula; a poor pine crop north of Florida was blamed. It was a good season for rarities, as evidenced by a surprising five Say’s Phoebes. Two Black-necked Swans at Lakeland provided a new exotic for the state.
