and the second

May-June

and Redbacked. A few Dowitchers, Stilt Sandpipers, Pectoral and White rumped have been taken. I have yet to trap a Wilson's Plover in a net but they have caught Semipalmated Plovers and Killdeers.

EBBA NEWS

It is of course desirable to have as calm weather as possible, bu I have trapped birds in nets in as strong a wind as 15 miles per hour. In my experience most of the birds I have taken lay quietly in the net fold; exceptions include all woodpeckers, tufted tits and redwings. I think that the species which has given me the most pleasure to trap in the nets is the Tree Swallow. It has certainly been the easiest to take out, and has lain the quietest.

WITH THIS ISSUE, A NEW EDITOR. . .

With this issue, a new editor takes over. We approach the task in all humility. To follow in the type marks of a long line of able, distinguished and hard-working editors is an exacting challenge. Albert E. Conway, editor for the past four years, brought to EBBA NEW new high standards of excellence. It will be your new editor's goal to maintain the publication's value and usefulness to every member.

We plan no drastic changes. We depend, as does every editor, upon the cooperation of our readers. In an especially real sense, EBBA NEWS is what you make it. Your suggestions, ideas, advice and above all your contributions of news, articles and information are EBBA NEWS. So send us (on paper) whatever is on your mind. As far as space permits, all material received will be published.

all and

-- Frank P. Frazier Editor, EBBA NEW
