

WHO IS BANDING THE MOST OF WHAT?

Edited by Lillian Cardinali

The vireos and warblers banded by EBBA members during 1957 are the birds covered in this issue; swallows, thrushes, etc., will appear in the January-February, 1959, issue. Be sure to read the instructions on how to send in your reports of 1958 bandings. These instructions will follow immediately after this section.

INSTRUCTIONS FOR FUTURE REPORTS: When you make up the list for the Banding Office (the list that accompanies your schedules) make an extra copy and earmark it for EBBA NEWS. But please add the locality where the birds were banded. As John Dennis thoughtfully suggested in a letter to Mrs. Cardinali, it will be "much more meaningful to use a system giving the locality where the birds were banded. In this way your column would also be a kind of guide to where to go to band certain birds."
