Walter K. Bigger of Trout Run, Pa., contributed the fol FINDING lowing: "I use Geological Survey maps, scale 1:50,000 PHOEBE NESTS and check areas for a large number of bridges. The street may be dry, but if there is a place available, chances are a Phoebe will have a nest under 90% of all bridges, and sometimes you'll turn up a long bridges a Poly of Barn Swallow nests, and once in a while on large bridges, a Robin ne You need a pair of hip boots, or at the least knee boots, depending on the size of the stream, and since I cover both rattlesnake and copperhe territory, they're added protection. A step-ladder is useful; four foot ladders have been high enough for me, except a couple of nests on bridge where even a ten foot ladder would not reach. And a couple of mirrors both of mine were obtained in a wrecked car lot - to see if there are or young birds. I simply hold the mirror above the nest, instead of ing about in it. The first mirror I keep in my pocket for this purpose; the second mirror, taken from a car, has double-knee-action, and is fas tened to the end of an eight-foot lath, and with it I can look into any nest that I can reach. The double-knee-action allows adjustment for an angle. I sometimes use it to check under a bridge simply by lowering to stick over the side and looking in the mirror."

IF I WAS ALADDIN, ---

I'D SWAP NEW TRAPS FOR OLD !

(But then a turban always slips off my bald head, - so I sell traps.)

Don't risk the welfare of your feathered guests by using worn out traps. Replace them with our tested equipment.
