

INDEX TO VOL. 24, 1961

The form and symbols used in this index follow those used in the ten-year index (Vols. 13-21) and the Vol. 22 and 23 indices, for which, including the present index, we are much indebted to Mrs. John C. Schmid. To conserve space, individual references for each species have not been included for the "Who is Banding Most of What" columns (q.v.), for a list of returns (see Returns), of species banded at Monhegan (see SCHNITZER), and of species banded by Bowdish and Middleton (see McDERMOTT).

BANDING PLIERS

These pliers have proved invaluable in Operation Recovery use as well as for home station every day banding. Ask any bander who has used them or has seen them in use.

These KENNARD type pliers have holes bored in flat-nosed pliers that fit standard band sizes to avoid lapped bands and make it quite easy to get a perfect fit. A band opener on the plier enables the user to open the band evenly with one operation. A spring provides tension to keep the opened band in the plier while handling the bird.

One plier will handle band sizes 0, 1, 1B and 1A (price \$6.00) and the other will handle sizes 2 and 3 (price \$5.00) -- prices include postage within the U.S. Send your order to the originator and manufacturer -- Roger N. MacDonald, 850 Main St., Lynnfield Center, Mass.
