

FIELD OBSERVATIONS

Fall Report: August-November 2008.—This report consists of significant bird observations compiled by the Field Observations Committee (FOC). Submissions to the FOC should be in the following format: species, number of individuals, age and sex of the bird(s), color morph if applicable, location (including county), date, observer(s), and significance. Seasons are winter (December-February), spring (March-May), summer (June-July), and fall (August-November). Submit observations to regional compilers within two weeks after the close of each season, or to the state compiler within one month. Addresses of the compilers are found at the end of this report. We greatly prefer observations sent via e-mail.

Sight-only observations are considered “reports” while only those supported by verifiable evidence (photographs, video or audio tapes, or specimens) are called “records.” Species for which documentation is required by the FOS Records Committee (FOSRC; <<http://www.fosbirds.org/RecordsCommittee/Official%20State%20List%202008.htm>>) are marked here with an asterisk (*). A county designation (in italics) accompanies the first-time listing of each site in this report. Abbreviations in this report are: AFB = air force base, AFS = air force station, EOS = end of season, NF = national forest, NP = national park, NS = national seashore, NSRA = north shore restoration area, NWR = national wildlife refuge, SP = state park, STA = stormwater treatment area, STF = sewage treatment facility, WEA = wildlife and environmental area, and N, S, E, W etc., for compass directions. Bold-faced entries denote birds newly reported or verified in Florida, or record counts.

SUMMARY OF THE FALL SEASON

The season was marked by tropical storm activity and its resultant appearance of pelagic and other species. *Fay* hit the Lower Keys 18 August, went inland at Naples 19 August, exited at Merritt Island 20 August, skirted the coast northward, then moved westward through the Panhandle to exit north of Pensacola 24 August. Cocoa Beach received nearly 33 inches of rain, and Titusville received more than 26 inches. Hurricane *Gustav* hit Louisiana 1 September and affected the western Panhandle. *Hanna* grazed the Florida Atlantic coast 5 September, and *Ike* skirted the Keys before making landfall in Louisiana and Texas 12 September. FOSRC rarities reported this season included the first breeding record of Least Grebes in Florida, at Boca Raton, two specimens of Northern Fulmars from the Atlantic coast, and a White Wagtail at Marathon. Two new exotics were recorded: Scaled Quail in Santa Rosa County, and Yellow-crowned Bishop in Palm Beach County. Additionally, a surprising number of Pin-tailed Whydahs was found in west-central Florida.

SPECIES ACCOUNTS

BLACK-BELLIED WHISTLING-DUCK: 2 pairs with downy broods at Cockroach Bay (*Hillsborough*) 19 Aug (B. Ahern); 1 adult with 11 chicks near Ocala (*Marion*) 6 Sep (M. Hafner); 2 at Tallahassee (*Leon*) 19 Sep (G. Menk); broods of 9, 11, and 13 NW of Lorida (*Highlands*) 8 Oct (P. Gray); 313 at Lake Apopka NSRA (*Orange*) 12 Nov (H. Robinson).
