

FIELD OBSERVATIONS

Winter report: December 2009-February 2010.—This report consists of significant bird observations compiled by the Field Observations Committee (FOC). Electronic submissions to the FOC should be in the following format: species, number of individuals, age and sex of the bird(s), color morph if applicable, location (including county), date, observer(s), and significance. Seasons are winter (December-February), spring (March-May), summer (June-July), and fall (August-November). Submit observations to regional compilers within two weeks after the close of each season, or to the state compiler within one month. Addresses of the compilers follow this report.

Sight-only observations are considered “reports” while only those supported by verifiable evidence (photographs, video or audio recordings, or specimens) are called “records.” Species for which documentation is required by the FOC and by the FOS Records Committee (FOSRC; <www.fosbirds.org/RecordsCommittee/OfficialStateList.aspx>) are marked here with an asterisk (*). A county designation (in italics) accompanies the first-time listing of each site in this report. Abbreviations in this report are: AFB = Air Force Base, AFR = Air Force Range, EOS = end of season, ff = “and following”, NERR = National Estuarine Research Reserve, NP = National Park, NSRA = North Shore Restoration Area, NWR = National Wildlife Refuge, SF = State Forest, SP = State Park, SRA = State Recreation Area, STA = Stormwater Treatment Area, STF = sewage treatment facility, WEA = Wildlife and Environmental Area, WMA = Wildlife Management Area, and N, S, E, W etc., for compass directions. Bold-faced entries denote birds newly reported or verified in Florida, or record numbers.

SUMMARY OF THE WINTER SEASON

Winter 2009-2010 will be remembered for its bitter cold. Temperatures reaching record lows on 11 January included 14°F (-10°C) at Tallahassee, 17° (-8.5°C) at Gainesville, 25° (-4°C) at Tampa, 31° (-0.5°C) at Fort Myers, 33° (0.5°C) at West Palm Beach, and 38° F (3.5°C) at Miami. Pensacola had 11 straight days of sub-freezing low temperatures, with highs not reaching 40° F (4.5°C). Large numbers of American Robins and Cedar Waxwings followed the frigid air mass, and mortality of exotic reptiles such as anoles, iguanas, and pythons in the southeastern Peninsula was considerable. This report contains few CBC observations.

FOSRC-review species submitted to the FOC were Cackling Goose at St. Marks NWR, Masked Duck at Viera Wetlands, two *Aechmophorus* grebes at Pensacola, Yellow-nosed Albatross off Key West, two single Manx Shearwaters at Ponce de Leon Inlet, Neotropical Cormorants at St. Marks NWR and Viera Wetlands, California Gull at Cocoa, Thayer’s Gull at Cocoa, Razorbill at Cocoa Beach, Florida’s first Ancient Murrelet at Ponce de Leon Inlet, Atlantic Puffins at Hobe Sound and in Brevard County, Broad-tailed Hummingbird at Fort Walton Beach, Say’s Phoebes at Fort Walton Beach and Asatula, Tropical Kingbird in Hendry County, Green-tailed Towhee at Fort Pickens, Lazuli Buntings at Oviedo and Thonotosassa, and Bullock’s Oriole at Tallahassee. A Swainson’s Thrush photographed at Everglades NP in February provided the first verifiable wintering record. A Silver Pheasant at Spring Hill and one or more Crimson-fronted Parakeets at Miami Springs added two new verifiable exotics to the Florida list.
