

FIELD OBSERVATIONS

Spring Report: March-May 2012.—This report consists of significant bird observations compiled by the Field Observations Committee (FOC). Electronic submissions to the FOC should be in the following format: species, number of individuals, age and sex of the bird(s), color morph if applicable, location (including county), date, observer(s), and significance. Seasons are winter (December-February), spring (March-May), summer (June-July), and fall (August-November). Submit observations to regional compilers within two weeks after the close of each season, or to the state compiler within one month. Addresses of the compilers follow this report.

Sight-only observations are considered “reports” while only those supported by verifiable evidence (photographs, video or audio recordings, or specimens) are called “records.” Species for which documentation is required by the FOC and by the FOS Records Committee (FOSRC; <<http://www.fosbirds.org/content/records-committee> >) are marked here with an asterisk (*). A county designation (in italics) accompanies the first-time listing of each site in this report. Abbreviations in this report are: AFB = Air Force Base, EOS = end of season, ff = “and following”, NERR = National Estuarine Research Reserve, NF = National Forest, NP = National Park, NSRA = North Shore Restoration Area, NWR = National Wildlife Refuge, SF = State Forest, SP = State Park, STA = Stormwater Treatment Area, STF = sewage treatment facility, WMA = Wildlife Management Area, and N, S, E, W etc., for compass directions. Bold-faced entries denote birds newly reported or verified in Florida, or record numbers. Photographs or video- or audio-recordings archived by the FOC are identified by a plus (+); BPA catalog numbers are provided for the most significant of these.

SUMMARY OF THE SPRING SEASON

Several weather patterns this season resulted in fallouts of migrants, primarily to the peninsula. A severe thunderstorm that struck the Keys on 21 April brought many Neotropical migrants to the Gulf coast as far north as Cedar Key, with many individuals lingering for several days. Another storm that hit Key West on 30 Apr brought truly astonishing totals to that island (see Table 1). Finally, Tropical Storm *Beryl*, which made landfall at Jacksonville Beach on 28 May, brought large numbers of White-rumped Sandpipers to Gainesville. Thirteen FOSRC rarities were reported this season; highlights included a Harris’s Hawk in Escambia County, Elegant Tern in Sarasota County, Townsend’s Solitaire in Alachua County, Varied Thrush in Collier County, Spotted Towhee in Santa Rosa County, and American Tree Sparrow in Brevard County. Three new exotics were reported: Emu in Volusia County, Scaled Quail x Gambel’s Quail in Pinellas County, and Pied Crow in Hillsborough County.

Table 1. Numbers of Neotropical migrants at Fort Zachary Taylor Historic SP, Key West 30 April 2012 (Morgan Tingley fide Chuck Geanangel).
