

## FIELD OBSERVATIONS

**Winter Report: December 2012-February 2013.**—This report consists of significant bird observations compiled by the Field Observations Committee (FOC). Electronic submissions to the FOC should be in the following format: species, number of individuals, age and sex of the bird(s), color morph if applicable, location (including county), date, observer(s), and significance. Seasons are winter (December-February), spring (March-May), summer (June-July), and fall (August-November). Submit observations to regional compilers within two weeks after the close of each season, or to the state compiler within one month. Addresses of the compilers follow this report.

Sight-only observations are considered “reports” while only those observations supported by verifiable evidence (photographs, video or audio recordings, or specimens) are called “records.” Species for which documentation is required by the FOC and by the FOS Records Committee (FOSRC; <fosbirds.org/official-florida-state-bird-list>) are marked here with an asterisk (\*). A county designation (in italics) accompanies the first-time listing of each site in this report. Abbreviations in this report are: AFB = Air Force Base, EOS = end of season, NERR = National Estuarine Research Reserve, nm = nautical miles, NP = National Park, NS = National Seashore, NSRA = North Shore Restoration Area, NWR = National Wildlife Refuge, SF = State Forest, SP = State Park, STA = Stormwater Treatment Area, STF = sewage treatment facility, WMA = Wildlife Management Area, and N, S, E, W etc., for compass directions. Bold-faced entries denote birds newly reported or verified in Florida, or record numbers. Photographs or video- or audio-recordings archived by the FOC are identified by a plus (+); BPA catalog numbers are provided for the most significant of these.

### SUMMARY OF THE WINTER SEASON

Without doubt, the avian event of the season was the unprecedented and massive invasion by Razorbills, perhaps the result of disruption of their southern wintering areas by Hurricane *Sandy* in October 2012. The invasion was first noted 7 December and continued through the winter, as some birds returned northward. All coastal regions were affected (there were no inland reports); the BPA contains records from 19 counties. Dozens of specimens were salvaged. Among other FOSRC rarities were: Neotropic Cormorant again bred at Wakodahatchee Wetlands; the state’s second Snowy Owl record, near St. Augustine; and the state’s first Costa’s Hummingbird banded at Tallahassee. Largely to save space, most reports include only the name(s) of the first and often last observer(s); few reports are accompanied by “et al.” Few reports from Christmas Bird Counts are referenced here.
