

FIELD OBSERVATIONS

Winter Report: December 2013-February 2014.—This report consists of significant bird observations compiled by the Field Observations Committee (FOC). Electronic submissions to the FOC should be in the following format: species, number of individuals, age and sex of the bird(s), color morph if applicable, location (including county), date, observer(s), and significance. Seasons are winter (December-February), spring (March-May), summer (June-July), and fall (August-November). Submit observations to regional compilers within two weeks after the close of each season, or to the state compiler within one month. Addresses of the compilers follow this report.

Sight-only observations are considered “reports” while only those observations supported by verifiable evidence (photographs, video or audio recordings, or specimens) are called “records.” Species for which documentation is required by the FOC and by the FOS Records Committee (FOSRC; <fosbirds.org/official-florida-state-bird-list>) are marked here with an asterisk (*). A county designation (in italics) accompanies the first-time listing of each site in this report. Abbreviations in this report are: AFB = Air Force Base, AFR = Air Force Range, EOS = end of season, NERR = National Estuarine Research Reserve, NP = National Park, NS = National Seashore, NSRA = North Shore Restoration Area, NWR = National Wildlife Refuge, SF = State Forest, SP = State Park, STA = Stormwater Treatment Area, STF = sewage treatment facility, WMA = Wildlife Management Area, and N, S, E, W etc., for compass directions. Bold-faced entries denote birds newly reported or verified in Florida, or record numbers. Photographs or video- or audio-recordings archived by the FOC are identified by a plus (+).

SUMMARY OF THE WINTER SEASON

Florida experienced another mild winter with few freezes south of Gainesville. Irruptive wintering species such as Golden-crowned Kinglet, Winter Wren, and Brown Creeper were scarce this season, and numbers of American Robins were low. The invasion of Black Scoters into the state continued from the fall with record numbers recorded on the Gulf Coast including 1,000 off Alligator Point. Only one Razorbill was found compared to the unprecedented massive numbers from this past winter. The state’s first Violet-green Swallow record [pending FOSRC acceptance] was obtained when one was well photographed at Everglades NP. Florida’s third-record Snowy Owl was found at Little Talbot Island SP, and to the delight of hundreds of birders remained for an amazing 26 days. There were 21 other FOSRC rarities reported this season, among these three Common Mergansers, the continuing Bar-tailed Godwit at Fred Howard Park, a Black-headed Gull in Putnam County, two California Gulls at Daytona Beach Shores, an exhausted Long-billed Murrelet in Palm Beach County, a Ruddy Quail-Dove that remained at Bill Baggs Cape Florida SP, a MacGillivray’s Warbler at Riverbend Park, a Lazuli Bunting in St. Lucie County and three Bullock’s Orioles including an adult male at Gainesville. Few reports from Christmas Bird Counts and hummingbird banding efforts are referenced here.
