

MARINE ORNITHOLOGY

Marine Ornithology is published by the Pacific Seabird Group, on behalf of the African, Australasian, Dutch, Japanese and UK Seabird Groups. The journal provides an international outlet for publications relating to marine birds, extending its reach and accessibility by appearing free on the World Wide Web in a form that can be downloaded and printed in the same style as the hardcopy document. The print version is available for both individual and institutional subscribers.

Print subscriptions are available to individuals resident in South Africa at an annual rate of Rand 50, which include membership in the African Seabird Group. Remittances should be sent to: John Cooper, African Seabird Group, c/o Avian Demography Unit, Department of Statistical Sciences, University of Cape Town, Rondebosch 7701, South Africa. E-mail: jcooper@adu.uct.ac.za.

Remittances for all institutional and all other individual subscriptions to the print version of *Marine Ornithology* should be sent in US Dollars or the equivalent (institutional US\$80, individual US\$40) to: Tony Gaston, 174 Dufferin Road - Unit 11, Ottawa, Ontario K1M 2A6, Canada. E-mail: marine.ornithology@ec.gc.ca.

Marine Ornithology publishes papers relating to the biology and conservation of birds associated with the marine environment—behaviour, biogeography, ecology, evolution, genetics, physiology and systematics. Papers are especially invited on topics relating to the special adaptations of marine birds, the relationship between seabirds and oceanography and seabird-fisheries interactions. Papers will be accepted on their merits as either pure science (advancement of knowledge), or conservation (advancement of seabird conservation), including issues relating to public policy and legislation. Normal academic publishing policy is followed with respect to authorship, originality, and sole publication. Everything that appears in the printed journal also appears on the website.

Submissions may be any of the following:

Review articles: major papers reviewing an area of marine bird science or conservation that achieve a new synthesis of existing information;

Papers: reports of research results or conservation action exceeding 2000 words in length;

Short communications: reports shorter than 2000 words;

Status reports: comprehensive reviews of seabird population status for species and geographical regions;

Forum articles: short papers commenting on material carried by the journal, reporting new hypotheses relating to marine bird science or conservation, or reporting biological or physical processes relevant to marine birds but hitherto little known or ignored by marine ornithologists.
