

ACKNOWLEDGEMENTS

I would like to sincerely thank John M. Condit, Curator of Higher Vertebrates, Ohio State University Museum of Biological Diversity, for information regarding and access to the Great Gray Owl specimen at Columbus. Mr. Condit would like to let everyone know that the Museum's collection has been moved from Sullivant Hall to 1315 Kinnear Road, and is open to members of the public for serious research purposes. Appointments are required, and should be obtained from Mr. Condit by calling (614) 292-0543. I would also like to thank Wendy Wasman, Librarian at the Cleveland Museum of Natural History, for allowing access to much of the literature cited throughout this report.

An Overview of the 1992 Fall Hawk Flight in Northwest Ohio

by Tom Kemp and Matt Anderson

As developing birders in the Toledo area, we learned that there were often good hawk flights in the fall on days with northwest winds. Unfortunately, this idea of westerly winds producing the flights prevailed until only recently. It was not until this fall, as we made a concerted effort to chart the movement of hawks through the area, that we discovered raptors are moving through on winds from virtually any direction and that the best flights were in fact on days with east winds, not west! This piece is presented as an overview of the 1992 fall hawk flight in northwest Ohio.

This fall, we specifically watched for migrating hawks on 29 days from September 6 until November 29, for a total of approximately 90 hours. Our best day was unquestionably September 12 when over 1600 hawks passed over the Oak Openings of western Lucas County. Most of these were Broad-winged Hawks. The following day produced over 500 hawks, most of which were again Broad-wingeds. The only other day when truly large numbers were seen was October 4. Almost all of the nearly 300 birds seen that day were Turkey Vultures and Sharp-shinned Hawks. Monthly totals were 2363 for September (93% Broad-wingeds), 1244 for October (65% Turkey Vultures), and 122 for November (57% Red-taileds). Needless to say, the November flight was beset by many days of bad weather and was rather disappointing.

Top individual days (with wind direction) for selected species follow. There were four 100+ days for Turkey Vulture: October 4 (east), October 7 (south), October 22 (southeast), and October 23 (southwest). The top day for Sharp-shinned Hawk was October 4 when 60 were counted. No other day came close to this. October 31 (east) was the best Red-shouldered Hawk day with 33 being seen. This was almost half of the entire season's total. Broad-winged Hawks numbered 1590 on September 12 and 476 on September 13 (both southeast). The best Red-tailed Hawk day was October 31 when 74 were counted. The Table provides a complete list of species and numbers seen.

That large numbers of raptors should be seen migrating through northwest Ohio each fall should come as no surprise. Thousands of hawks round the western end of Lake Erie at Holiday Beach Provincial Park in southwest Ontario, and then head south. It is likely that most of these pass through the Toledo area on their way to their wintering quarters. That we seen so many of them right over our yards (near Oak Openings Metropark) is due to geography. Our homes lay on a line due

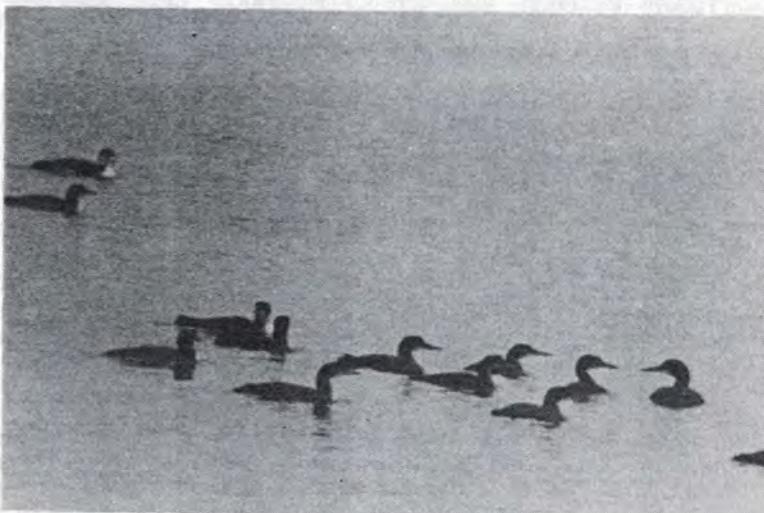

southwest from Lake Erie Metropark (which is just north of Monroe, MI), the first landfall for the hawks as they pass over from Canada. Many apparently pass directly to the southwest over the Oak Openings.

The big question is how much do the birds fan out after reaching the Michigan shoreline? The answer apparently is "a lot". The average number of raptors seen at Holiday Beach over the past fifteen fall seasons is over 70,000 and in 1991 an astonishing 310,000 birds of prey (85% Broad-wingeds and Turkey Vultures) flew past Lake Erie Metropark in southeastern Michigan! We are seeing only a tiny percentage of these birds.

Finally, virtually all of our observations are restricted to weekends or an occasional 45 minutes during lunch hour. An observation post manned consistently through the season would certainly result in many more birds counted.
