

DESCRIPTION OF A NEW *EUETHIA* FROM OLD PROVIDENCE ISLAND.

BY CHARLES B. CORY.

***Euethia grandior*, sp. nov.**

SP. CHAR. — General appearance of *E. bicolor*; but larger, the wing is much longer, and both mandibles are black.

*Adult* ♂ (Type, No. 10,274, Coll. C. B. Cory):— Head, throat, breast, and upper belly black; a patch of dull yellowish white from the belly to the vent; flanks and under tail-coverts dull olive green; back and rump olive green; quills brown, edged with olive green; tail greenish above, slaty brown beneath, and showing numerous indistinct bands when held in the light; bill black.

Length, 4.50; wing, 2.45; tail, 2; tarsus, .60; bill, .40.

The great length of wing seems to be constant in sixteen specimens from Old Providence. I have compared it with forty-four examples of *E. bicolor* from other localities.

*Habitat.* Island of Old Providence, Caribbean Sea.
