

Note on Rostratulinae.—It would appear that Vieillot instituted the genus *Rostratula* in 1816, before Cuvier proposed *Rhynchæa* for the same Painted-snipe, though the former name has never become current. These Snipes are peculiar in several respects, and especially in those secondary sexual characters for which the female is conspicuous, among which are the tracheal convolutions. In any system which recognizes several families of charadriomorphic birds, such characters would seem to be of more than generic value.—ELLIOTT COUES, *Washington, D. C.*

The Wild Turkey in Massachusetts.—When a pupil of the Public Latin School in Boston in 1837-38, I spent a portion of my summer vacations in Northampton. I distinctly remember conversing with some of the town's people at those times in regard to the existence of a flock of Wild Turkeys (*Meleagris gallopavo*) which had frequently been seen in the neighborhood of Mount Holyoke. I was much interested in the circumstance, which even then was deemed very unusual.

These birds had the range of a large tract of wild mountainous country, in some parts almost inaccessible and impassable, lying at the base of and comprising Mount Holyoke, and to the southwest also including Mount Tom and its surroundings. An incident occurring at this period serves to show the character of this district. A stranger ascended Mount Holyoke to enjoy the view from its summit. In descending he missed the path, and becoming bewildered, wandered away into the forests at the base. Here he passed two or three days before he succeeded in extricating himself in a famished condition, and having upon his person only a small portion of the holiday attire in which he ascended the mountain.

I am unable to state the exact period at which this flock became exterminated, but should say that it must have been in 1840, or thereabouts.

My friend, Mr. J. A. Allen, has kindly given me the following references on this subject, which I have looked up.

Hitchcock in his 'Geological Report of Massachusetts,' 1883, says, "Wild Turkeys are frequently met with on Mount Holyoke." In the same volume, Dr. Ebenezer Emmons, in his list of the birds, says, "The Wild Turkeys have now become scarce and nearly extinct."

In a communication to the 'Bulletin' of the Nuttall Ornithological Club (Vol. I, 1876), Mr. J. A. Allen says, "According to John Josselyn the Wild Turkeys began early to decline." This author, writing in 1672 ('New England's Rarities') says, "I have also seen three score broods of young Turkeys on the side of a marsh sunning of themselves in a morning betimes, but this was thirty years since, the English and the Indians have now destroyed the breed so that it is very rare to meet with a wild Turkey in the Woods, but some of the English bring up great stores of the wild kind which remain about their Houses as tame as ours in New England."

Thompson, in his 'History of Vermont,' says, under date of 1842, "A few of the Wild Turkeys continue still to visit and breed upon the mountains in the southern part of the state."

In a communication to the 'Proceedings' of the Essex Institute, under
