GENERAL NOTES.

Occurrence of Larus marinus on the Southern Coast of New Jersey.— While on a ducking expedition at Atlantic City, N. J., I observed, during and after the 'blizzard' of last March (1888), three or four specimens of the Great Black-backed Gull soaring about as familiarly and with as wary impudence as is their wont in more northern latitudes.

Though anable to procure a specimen, I was assured by Capt. Sam. Gale of the same place that they were of yearly occurrence on that coast during winter, and that he had a standing offer from a local taxidermist of five dollars for every specimen taken, but that so far he had only procured one. So certain was I of my own identification, I did not think it necessary to verify it by personal examination of the specimen referred to. I am quite confident that Nuttall's extension of the winter range of this Gull to the "sea coasts of the extreme Southern States" is yet capable of verification as far south as the entire coast of Virginia. Indeed so storm-loving, erratic, and solitary a species as this, sets all petty limits at defiance, to the distraction of note-taker and book-maker alike; and, as soon as you have him booked for residence in Cape May, presto, the next cold wave wafts him to Cape Charles and you begin to understand how it got into print that Larus marinus "extends its residence in America as far as Paraguay!"*—SAM'L N. RHOADS, Haddonfield, New Fersey.

The Yellow-nosed Albatross (*Thalassogeron culminatus*).—In 'The Auk' for January, 1888, Mr. Montague Chamberlain of St. John, N. B., mentions his having seen the skin of this bird in the Laval University, Quebec. The bird in question was killed on the 20th of August, 1885, at the entrance of River Moisic, on the north shore of the St. Lawrence. It was shot by a fisherman named Couillard Desprès. I saw the bird a few days after it was shot, but could not identify the species. I sent a short description of it to Dr. C. H. Merriam.
