

it may be of interest to the author to know that the American Museum of Natural History in New York has also a mounted specimen of the Great Auk, where it has been among its prominent exhibits for the last twenty years.—J. A. A.

**Huntington's 'In Brush, Sedge, and Stubble.'**<sup>1</sup>—Mr. Huntington's 'In Brush, Sedge, and Stubble' appeals alike to the sportsman, the naturalist, and the lover of art. The work is proposed as a series of "monographs on our feathered game," "written from the point of view of the sportsman, with a preference for the picturesque rather than the scientific. . . . In a word, we go out-of-doors from Montauk to San Lucas, and, listening to the whirring and whistling of wings, we observe the performance of dogs, and see America picturesque." The first two parts treat of the sage Grouse, the Sharp-tailed Grouse, and the Prairie Grouse.

The illustrations consist of half-tones from photographs of the birds described, and of hunting scenes and characteristic landscapes of the regions inhabited by the game under consideration, partly from nature and partly from sketches, principally by the author.

The illustrations are beautifully reproduced, abundant, picturesque, and exceedingly attractive. The text is very good ornithology, written, as stated by the author, from the sportsman's point of view, with more or less personal incident interspersed. All lovers of finely illustrated books relating to nature, and especially all sportsmen, will doubtless warmly welcome Mr. Huntington's 'In Brush, Sedge, and Stubble.'—J. A. A.

**Oberholser on the Wrens of the Genus *Thryomanes*.**<sup>2</sup>—The present paper of thirty pages deals with the Wrens of the *bewickii* group, of which 3 species and 12 additional subspecies are recognized, all the latter being variations, in most instances not strongly marked, of *Thryothorus (Thryomanes) bewickii* of the A. O. U. Check-List. The group ranges across the continent from the Atlantic to the Pacific, and from Pennsylvania, southern Minnesota, Colorado, and southern British Columbia southward to southern Mexico (Oaxaca), including the Socorro and Guadalupe Islands, off the west coast of Mexico. Of the 12 subspecies of *T. bewickii*, seven belong to the United States, the remaining five occurring in Mexico. In other words, 7 new sub-
