Zamelodia versus Hedymeles.— The generic name Zamelodia Coues has been, during recent years, in general use for our North American Rosebreasted and Black-headed Grosbeaks. This generic term was originally proposed by Dr. Elliott Coues (Bull. Nuttall Ornith. Club, V, No. 2, April, 1880, p. 98) for Loxia ludoviciana Linnæus and Guiraca melanocephala Swainson, because *Hedymeles* Cabanis (Mus. Hein., I, June, 1851, p. 152; type by subsequent designation [Gray, Cat. Gen. and Subgen. Birds Brit. Mus., 1855, p. 71], Loxia ludovicianus Linnæus) was supposedly invalidated by Hedymela Sundevall (Öfvers. Kongl. Vetensk.-Akad. Förhandl. Stockholm, 1846 (1847, p. 225) for a genus of Muscicapida. Although Habia Reichenbach nec Blyth was for a considerable period used by American ornithologists for this group, Zamelodia was restored by Dr. Coues (The Auk, XIV, No. 1, January, 1897, pp. 39-42) when Habia was found to be preoccupied. The generic name Hedymeles Cabanis is not, however, according to either the International Code or to Canon XXX of the revised American Ornithologists' Union Code of Nomenclature, to be rejected on account of Hedymela, since it is a word with a different classical termination other than grammatical gender. In fact, it is a case exactly parallel to that of Hydrobata and Hydrobates (cf. Hartert, Hand-List British Birds, 1912, p. 149). It should, therefore, displace Zamelodia, and the two species of the group stand as

> Hedymeles ludovicianus (Linnæus). Hedymeles melanocephalus (Swainson).

Rough-winged Swallow, Unusual Nesting Sites.—A number of years ago a concrete retaining wall was built along the bank of Grand River, midway between the top and bottom, to protect the street above from the annual spring slipping. Three-inch iron drainage pipes were placed at intervals of a few feet and these pipes projected some two or three feet out of the face of the wall. The Rough-winged Swallows used these pipes yearly as nesting sites, continuing the practice until the wall itself slipped into the river below.

At least half a dozen pipes were occupied each year by the birds, although a few hundred feet up the river was a long extent of high shale bank with many cracks and fissures, the natural site of the species, and which is used at the present time as a nesting community for a number of pairs. This is the only instance I have seen, nor have I yet found in print any record of the Rough-wing departing from its usual nesting custom.— E. A. DOOLITTLE, Painesville, Ohio.

Late Nesting of the Red-eyed Vireo in Detroit, Mich.— While hunting birds, with field glasses, on Belle Isle on the morning of September 25, I was startled by the appearance of a Red-eyed Vireo followed closely by a young bird. The youngster flipped its wings and begged persistently
