

article on the present status of the Trumpeter Swan in North America. In this he enumerates all the records of that bird that he could find, either from personal correspondence or from the literature at hand. Let me point out one notable omission. In the 'Wilson Bulletin,' September, 1902, p. 80, there is a record for the Trumpeter Swan (*Olor buccinator*) in April, 1900, from Jackson County, Ohio (Henninger, Birds of Middle Southern Ohio). The history of this specimen is as follows: The bird was shot on either April 18 or 19, 1900, near Wellston, Jackson Co., Ohio, and sent in the flesh to Mr. Oliver Davie, the well-known author and taxidermist of Columbus, Ohio. Mr. Davie and I were good friends and talked about this specimen several times. Mr. Davie's identification was certainly correct. He mounted the bird and returned it to the owner, whose name I have forgotten, nor do I know what has become of the bird by this time.— W. F. HENNINGER, *New Bremen, Ohio*.

Little Blue Heron on Long Island, N. Y.— On April 5, 1919, I was shown a Little Blue Heron (*Florida cærulea*), which had been found dead, a day or two before, on the banks of the Nissequogue River, at Smithtown, Long Island, N. Y. The body was sent to me by express and received on April 11, 1919. I took it up to the American Museum of Natural History and found my identification was correct. It was too far gone to be mounted, but dissection proved it to be a male. The stomach was practically empty. It was in the blue plumage, and on April 5, when I first saw it, was in first-class condition. I foolishly did not take it with me, as I did not realize its rarity, and only wrote for it afterwards.

Eaton only gives four spring records for New York, viz.: "Lawrence (N. T.), April 3, 1885, Far Rockaway, L. I."; (Byram) Dutcher's Notes, April 7, 24, 1891, Shelter Island, L. I.; Dutcher's Notes, Montauk, L. I., April 20, 1898," and Binghamton, May 8-12, 1900. Miss Lillian Hyde.— ROBT. B. LAWRENCE, *New York City*.

Wood Ibis in Massachusetts.— Through the thoughtfulness of Mr. E. H. Forbush and the Massachusetts Commission on Fisheries and Game, the Boston Society of Natural History has been presented with a young Wood Ibis (*Mycteria americana* Linné) taken at Chilmark, Martha's Vineyard, Massachusetts, on November 26, 1918, by James A. Vincent.

This is the second record of the species for Massachusetts, and the fifth for New England; Maine, Vermont, and Rhode Island each having one instance of its presence.— W. SPRAGUE BROOKS, *Boston Society of Natural History*.

Roseate Spoonbill in Utah.— On July 2, 1919, a Roseate Spoonbill (*Ajaja ajaja* Linn.) was brought to me for identification. It had been killed at Wendover, Utah, by Joseph Condley and was one of five that appeared on his ranch. The specimen was a male and the skin is now in my collection.
