

Dr. Collinge made good application of this method in his report⁵ on the Barn Owl, founded on the contents of 12 stomachs and more than 300 pellets. The investigation like all others relating to this species is emphatically in the bird's favor.

A study of 'The Food of the Nightjar (*Caprimulgus europaeus* Linnæus)⁶ is prefaced by a statement that this species had been greatly diminished in numbers by persecution because of its being considered a hawk and on account of general prejudice and superstition due to its nocturnal, hence little-known, habits. This is unfortunate as the species is almost exclusively beneficial. The case parallels that of the American Nighthawk and Dr. Collinge's conclusion like that of bird-lovers in this country, is that these birds should receive the maximum of protection.—
W. L. M.

The Ornithological Journals

Bird Lore. XXII, No. 2. March-April, 1920.

A Bird Watcher in France. By Dr. Herbert R. Mills.

Field Sparrows. By F. N. Whitman.—Some excellent photographic illustrations of the nest and young

A Surprised Crow. By Verdi Burtch.—An amusing set of photographs.

An Unusual Horned Lark Family. By Frank Levy.—Eight eggs all of which hatched.

Migration Group Chart. By S. A. Hausman.—A good diagrammatic representation of residents, summer residents, etc.

The Plumages of North American Birds. By F. M. Chapman, Color plate by L. A. Fuyertes.—The Arizona, Florida, California and Santa Cruz Jays.

Dr. A. A. Allen in the School Department and the Editor on the preceding page dwell upon the importance of accuracy in observation. The latter suggests the desirability of writing down an accurate description of all parts of the bird that may be under observation so as to compel the observer to gain a complete idea of what he sees while Dr. Allen urges that teachers do not hesitate to question the accuracy of children's identifications when they would seem to be unlikely. Too much emphasis cannot be placed upon the importance of this matter. The carelessness is not limited to children but to many of those whose observations are being published as part of the records of the National or State governments or of clubs and societies and we are forced to rely upon the rigorous pruning and questioning of an editor to save us from a mass of absolutely worthless records. The plan practiced by certain careful observers of

⁵ Some remarks on the food of the Barn-Owl (*Strix flammea* Linn.), Journ. Wild Bird Investigation Soc., Vol. 1, No. 1, Nov. 1919, pp. 9-10.

⁶ Journ. Ministry Agr., Vol. 26, No. 10, Jan. 1920, pp. 992-5.

never recording a bird that both have not seen and satisfactorily identified is excellent though of course it can only be practiced by two observers working always together. Confirmation of other observers is an excellent feature and the person who always works alone and always sees the largest number of species cannot help but arouse a doubt as to whether his enthusiasm has not carried him away.

Bird-Lore. XXII, No. 3. May-June, 1920.

Spring Thunder. By H. E. Tuttle.—Drumming of the Ruffed Grouse, with photograph of bird in action.

Some Robins' Nests. By W. F. Smith.—Curious locations, on the hub of a wagon, a stove-pipe, etc.

A Much-used Robin's Nest. By D. D. DuBois.—Six broods reared in the same nest during several successive years.

The educational leaflet deals with the Yellow-bellied Sapsucker with a plate by Sawyer and text by T. Gilbert Pearson. In the latter the author seems a little mixed in his migration dates; the swallows as a rule are early migrants in the autumn but the Swift instead of leaving with them as he states remains in the vicinity of New York about as late as does the Sapsucker.

Arthur A. Allen has an excellent article on bird song in which he adopts a scheme of notation somewhat like that advocated by A. A. Saunders in 'The Auk.' (1915, p. 173.)

An unfortunate newspaper article on a supposed Audubon collection of birds at Amherst College is reprinted in the Audubon department apparently without making any effort to determine its accuracy, while a line to Mr. Bangs, whose name appears in connection with the story, would have shown that, like many articles in the daily press, the whole thing was the result of some reporter's too vivid imagination.

The Condor. XXII, No. 2. March-April, 1920.

The Nesting Habits of the Alaska Wren. By Harold Heath.—Raises the interesting question as to the possible restocking of the island of St. George where the bird is found. The wrens are reported by natives to be abundant there some years and to disappear in others. As the Aleutian Islands, according to Oberholser, are populated by different races with the exception of Kodiak, then the repopulation must take place from this remote island, 700 miles away, but it is hardly conceivable that some representatives from the other nearer islands should not also come to the Pribilofs, if any such migration occurs. Mr. Heath prefers to think that one or more pairs have survived even in years when they seemed to have disappeared. In the winter of 1919, however, only a single pair of the birds could be found and it would therefore seem that the existence of the bird in the Pribilofs was precarious.

Autobiographical Notes. By Henry W. Henshaw. (Continued.)

Nesting of the Dusky Poorwill near Saugus, Los Angeles Co., California. By A. J. Van Rossem and J. H. Bowles.

Bryant Marsh Sparrow upon the Hills. By Jos. and J. W. Mailliard.

The Raptores of Nelson County, Kentucky. By B. J. Blincoe.

Notes on the Birds of Wakulla County, Florida. By John Williams (Completed in June number).

Bluebird Migrations. By Howard C. Brown.

A Synopsis of the Genus *Thryomanes*. By Harry C. Oberholser.—This revision recognizes the same races and species as the author's previous monograph of the genus with the addition of *T. albinuchus* (Cabot) placed in the genus by Mr. Ridgway, and the two races described by Grinnell, *T. b. catalinae* and *T. b. marinensis* with a new race, *T. b. arborius* (p. 25) from Agassiz, B. C., which is said to range over the southwestern corner of British Columbia and adjacent Washington.

Wilson Bulletin. XXXII, No. 2. June, 1920.

List of Birds made during service in France and Germany. By C. C. Sanborn.

The Oologist. XXXVII, No. 3. March 1, 1920.

Bird Nesting Notes from Yates County, N. Y. By C. F. Stone.—Additional notes in May issue.

The Oologist. XXXVII, No. 4. April, 1920.

Bohemian Waxwings in Kansas. By P. B. Peabody.

The Oologist. XXXVII, No. 5, May, 1920.

Annotated List of the Birds of Brooke County, W. Va.—Anonymous.

Journal of the Museum of Comparative Oology. I, No. 3-4. March 31, 1920.—Like its predecessor this issue is largely devoted to articles by Mr. W. L. Dawson in exploitation of his Museum of Comparative Oology. There are, however, several special articles dealing with birds eggs, as follows:

An Oölogical Revision of the Alciformes. By W. L. Dawson.—This is a remarkable contribution in which the author first admits that he is not "deeply versed in the lore of taxonomy" and then states that the taxonomist is "all too easily satisfied with incomplete, or superficial evidence." Following this and some ridicule of the systematic worker he proposes that classification be based upon eggs alone. It is true that a knowledge of eggs is an aid to classification, and in certain groups has pointed to important relationships, just as have many other characters, but to insist upon using one character only, no matter what the character may be, is preposterous. There are resemblances between eggs that mean nothing from the phylogenetic point of view, just as there are resemblances in structure between birds which are only remotely related. Mr. Dawson's italicised "propositions" governing the matter we can hardly regard seriously.

Gaps in Our Knowledge of Eggs. By A. C. Bent.—Calls attention to certain species of North American birds the eggs of which are unknown or about which additional information is needed.

The Ibis. (11th Series), II, No 2. April, 1920.

List of the Birds of the Canary Islands, with detailed reference to the Migratory Species and the Accidental Visitors. Part VI. Appendix A—Appendix B. By D. A. Bannerman.

A Contribution to the Ornithology of the Island of Texel. By C. B. Ticehurst.

A List of the Birds collected in northern Saskatchewan and northern Manitoba by Captain Buchanan in 1914. By J. H. Fleming [published also in 'The Canadian Field Naturalist' for December, 1919].

Notes on South African Accipitres. By C. G. Finch-Davis.—Treats of habits and distribution.

A Review of the African *Dicruridae* in the British Museum. By D. A. Bannerman.

A Nominal List of the Birds at present known to inhabit Siam. By Count N. Gyldenstolpe.

On the Type Specimen of *Chloephaga inornata* King in the British Museum, and some further Notes. By F. E. Blaauw.—The type specimen is really a young *magellanica* so that *inornata* King becomes a synonym of that species while the Black-banded Goose reverts to the name *C. dispar*.

On a New Species of Bower-bird. By T. Carter and G. M. Mathews. *Chlamydera maculata nova* Mathews. Under certain contingencies not clearly explained, Mr. Mathews suggests that the form be renamed *C. maculata carteri* (p. 499).

Bulletin of the British Ornithologists' Club. No. CCXLVIII. March 4, 1920.

Largely devoted to an address by E. C. Stuart Baker on 'The Value of Subspecies to the Field Naturalist.' Dr. Hartert, in commenting upon the address, stated that he objected to making supposed intergradation between two forms a criterion of the subspecies and cited the case of island races which were formerly regarded by American ornithologists as full species because of the impossibility of intergradation but which now they regard as subspecies. This action as we understand it has not been a change of opinion but rather the recognition of another kind of intergradation, *i. e.*, the overlapping of characters. While we do not think that the actual existence of intergrades should be required to establish a form as a subspecies, we nevertheless cannot admit subspecific relationship between forms separated by great distances and by other species of the genus, as for instance Dr. Hartert's listing of the Carolina Chickadee (*Penthestes carolinensis*) as a subspecies of an old world species.

The following new forms were described:

By Dr. Van Someren: from East Africa and Uganda: *Cercomela turkana* (p. 91) Turkana country, west of Lake Rudolf; *Eremomela badiceps turneri* (p. 92) Yala River; *E. elegans elgonensis* (p. 92) S. Elgon; *Sylvietta isabellina macrorhyncha* (p. 92) Tsavo; *Dryodromus rufifrons turkanae* (p. 93) Meurressi; *Prinia mistacea immutabilis* (p. 93) Nakuru Lake; *Hedydipna platura*

karamojoensis (p. 93) Karamojo; *Cinnyris habessinicus turkanae* (p. 94) Lake Rudolf; *Anaplectes jubaensis* (p. 94) Juba River; *Charitillas kaviron-densis* (p. 95) Kakamega Forest; *Dicrurus elgonensis* (p. 95) Lerundo; *Crateropus melanops clamosus* (p. 95) Naivasha; *Campothera teniolaema barakae* (p. 96) Baraka.

By J. D. LaTouche: *Petrophila solitaria magna* (p. 97) a large race of *P. s. manilla* without type locality or mention of type specimen.

By A. DeCarle Sowerby: *Uragus sibiricus fumigatus* (p. 99) Tataschew, southern Siberia.

Bulletin of the British Ornithologists' Club. No. CCXLIX. March 31, 1920.

G. M. Mathews described six new forms of Australian birds.

C. Chubb proposed: *Dendrocinlopa* (p. 107) new genus; type *D. guianensis* Chubb; *Vavasouria* (p. 107), type *Ampelis nivea* (Bodd.); *Calloprocnias* (p. 107) type *Casmarhynchus tricarunculatus* (Verr), also *Rhynchocyclus sulphurascens examinatus* (p. 108) Bartica, British Guiana; *R. poliocephalus inquisitor* (p. 108) Bartica; *R. flaviventris gloriosus* (p. 108) Quonga, British Guiana; *R. f. collingwoodi* (p. 109) Trinidad.

Bulletin of the British Ornithologists' Club. No. CCL. April 30, 1920.

E. C. Stuart Baker presented a revision of *Prinia sylvatica* recognizing three races and of *Pericrocotus peregrinus* and *P. brevirostris* recognizing five forms of the former and four of the latter. The following are described as new: *P. p. vividus* (p. 114) Attaran River, Burma; *P. p. pallidus* (p. 115), Larkhana, Sind; *P. p. saturatus* (p. 115), W. Java; *P. p. styani* (p. 117), Sechuen; and *P. spectiosus fohkiensis* (p. 116), Yamahan, Fohkien.

H. F. Witherby publishes some notes on birds from southern Spain showing among other things that the true *Cisticola cisticola cisticola* must be restricted to this country and north Africa and proposes for the bird of the rest of Europe, Asia Minor and Egypt, *C. c. harterti* (p. 120). Platea, Greece.

An account of the seventh oological dinner is appended.

British Birds. XIII, No. 10. March, 1920.

Ornithological Notes from Norfolk for 1919. By J. H. Gurney.—Includes an account of the destruction of Rooks during migration.
