cupido and the latter T. c. americanus. While it is by no means certain that Reichenbach's name americanus applies to the Prairie Chicken and not to the Heath Hen, he thinks it best not to overturn customary usage. In Dr. Gross's bibliography we note the omission of an anonymous account of the bird in the New Jersey Pine Barrens and its wanton destruction there by unscrupulous gunners (Doughty's Cabinet of Natural History, Vol. II, 1832, p. 16, dated January 4, 1832 and signed I.) Also the author listed as "Herbert L. Goggins" in the bibliography should be Herbert L. Coggins, former secretary of the Delaware Valley Ornithological Club and former president of the Cooper Club.—W. S.

Collett's 'The Heart of a Bird.'1-This little volume consists of a series of twelve sketches of bird life in England, covering the twelve months of the year, and written by Anthony Collett, who has been termed "one of the most sensitive and discerning of out door observers of nature." Most of the sketches have appeared previously in the London 'Times' and are now gathered together in book form with an introduction covering the general structure and activities of birds, which for terseness of expression and clearness and originality has seldom been equalled. "Birds," says Mr. Collett, "are flying things full of eagerness and mobility. hearts beat more swiftly than those of mammals, their blood is hotter, they overflow with the self expression of song," and again speaking of flight he says: "Of nature's three attempts to make vertebrates fly, birds have been by far the most successful * * * pterodactyls were drearylooking beasts, unless the naturalists who reconstruct them from their stray bones do them injustice; they flew feebly and it is very unlikely that they sang."

Each of the monthly chapters treats of observations on birds in some part of England with descriptions of characteristic climate and scenery; while there are discussions on migration, song, feeding habits, etc. and the pages teem with original observations giving us some of the most vivid pictures of British bird life that we have read, as well as food for thought on many problems of bird activity —W. S.

Gorges' Life of Ernest Harold Baynes.2—The many who have listened to the lectures of the late Ernest Harold Baynes and especially those who have enjoyed the privilege of his acquaintance will be deeply interested in Mr. Gorges' sympathetic biography. Here is told the story of his early life, his athletic prowess, and his overpowering love of birds and animals which led him to the field of literature and to the lecture platform. Those who knew him only as the champion of bird life and
