How many years would it take to replace your collection?

Safe-guard your valuable specimens

PERMANENT SPECIMEN PRESERVATION

with Lane ZOOLOGY AND ORNITHOLOGY SPECIMEN CABINETS

- Double Wall Construction
- Pest-Proof and Air Tight Seal
- Double Panel Door
- Lift-Off Safe Type Hinge
- Fumigant Compartment
- 3-Point Locking Mechanism
- Front and Back Air Tight Seals
- Specimen Trays of Aluminum and Masonite. Lightweight, sturdy and easy to handle.

Skin Case #201 (illustrated)
Holds large trays for larger specimens.

Skin Case # 202 (not illustrated)
Divided for half-size trays for smaller specimens.
Helping and Communal Breeding in Birds
Ecology and Evolution
Jerram L. Brown

At your bookstore or
Princeton University Press
41 William Street, Princeton, NJ 08540

"This book is unique in the field for the depth of its treatment of empirical studies, the exposition of widely disparate evolutionary scenarios, and its unblinking approach to difficulties of interpretation in the literature. It is a clear guide to concepts for workers in animal behavior in general and a rich source of stimulation for new and synthetic approaches to sociality."
—Kerry Rabenold, Purdue University

This work is an overview of the extensive and frequently controversial literature on communally breeding birds developed since the early 1960s, when students of evolution began to examine sociality as a product of natural selection. Jerram Brown provides original data from his own theoretical and empirical studies and summarizes the wide array of results and interpretations made by others.

Lovebirds, Cockatiels, Budgerigars:
BEHAVIOR AND EVOLUTION
by J. Lee Kavanau
University of California at Los Angeles

Guided by unique, exhaustive laboratory studies of psittacine behavior, the author has deduced an insightful and remarkably comprehensive scenario of many aspects of the origin and evolution of birds and the roots of their behaviors...must reading for all interested in avian behavior and reproduction.....a wealth of information and concepts that will be of interest to all evolutionists. Professor E.C. Olson

Feb., 1987 1,005 pp., 7 indices, 1,455 refs. $69

- A broad analysis and synthesis of avian evolution guided by newly discovered, relict reproductive behavior of small parrots that yields insights into ancestral habits of nesting and egg care.
- Courtship, pair bonding, coitus, nesting, egg recovery, incubation, allofeeding and brooding of young, and familial interactions.
- Laboratory care, general biology, morphology, reproductive physiology, endocrinology, neurology, pathology, developmental biology, ecology, biogeography, paleological correlates, and comparisons with reptiles and other vertebrates.

Prepay only, check or money order. Add U.S. $4 for postage and, handling within, or $6 outside, continental U.S. In California add $4.50 for sales tax. Mail orders only.

ANIMAL BEHAVIOUR

European Editor: F A Huntingford
American Editor: C Snowdon

Published for the Association for the Study of Animal Behaviour (UK) and the Animal Behaviour Society (USA), ANIMAL BEHAVIOUR is a leading international journal in its field, publishing both research and review articles on a wide variety of topics.

Published bimonthly, ANIMAL BEHAVIOUR is able to provide a wide forum for discussion of a diverse range of papers. ANIMAL BEHAVIOUR has a wide readership among ethologists, psychologists, sociobiologists, ecologists, agriculturalists and veterinarians with an interest in animal behaviour.

Among papers for future publication are:
★ The amniotic fluid: an important priming role in kin recognition P Hepper
★ Temporal dynamics of facultative social parasitism in bumblebees R M Fisher
★ Food intake rate and resource availability: flocking decisions in house sparrows M Elgar
★ Owners, floaters and competitive asymmetries among territorial redwinged blackbirds C G Eckert and P J Weatherhead
★ Queing for males in thirteen-lined ground squirrels P L Schwagmeyer and G A Parker
★ A genetic analysis of call-site selection in a hybrid population of treefrogs T Lamb
★ Castration affects territorial and sexual behaviour in free-living male lizards, Scleroporus laroii
M C Moore

Published by: Baillière Tindall, 1 Vincent Square, London SW1P 2PN
THE AUK welcomes original reports dealing with the biology of birds, emphasizing the documenta-
tion, analysis, and interpretation of laboratory and field studies, theoretical or methodological
developments, or reviews of existing information or ideas. Contributions are encouraged from
throughout the world, but must be written in English.

SUGGESTIONS TO CONTRIBUTORS. Submit the typewritten original and two copies of the
text, tables, and all other material to the Editor. Three copies of illustrations should be submitted.
All typewritten material must be double-spaced on one side of numbered 8½ x 11 inch (21½ x 28 cm)
good quality bond paper, with at least 1 inch (2½ cm) margins. Originals typed on erasable, light
weight, or mimeo bond will not be considered, but copies may be clear reproductions. Number
pages through the Literature Cited. Avoid footnotes. The style of manuscripts should conform to
general usage in recent issues. A cover page should contain the full title, a shortened version of
the title (not to exceed 35 characters in length) for use as a running head, and your address at the
time the research was conducted. Your present address, if different, should be given at the bottom
of the first text page. The cover page should include the name and full address of the individual
to whom proof is to be sent.

Each article should be preceded by an Abstract not exceeding 5% of the length of the paper. The
Abstract should recapitulate the findings of the paper, not describe the work done. Acknowledg-
ments should follow the text and precede the Literature Cited. Scientific and English names of
birds always should be given where first mentioned in the text, and should follow the A.O.U.
Check-list of North American Birds and supplements or the appropriate equivalent unless depar-
tures are explained and defended. SI metric units should be used in all measurements. In general,
abbreviations of statistical terms and mensural units should conform with the Council of Biology
Editors (CBE) Style Manual, 4th ed. Use the 24-hour clock (0800 and 2030) and “continental” dating
(1 July 1971).

Tables, which must not duplicate material in either the text or illustrations, are typewritten
(double-spaced throughout!) separately from the text. Each table should contain a short but com-
plete heading, and must not contain vertical rulings. Illustrations (including labels of coordinates)
should be on 8½ x 11 inch (21½ x 28 cm) sheets, and must be mailed flat. The name of the author
and the figure number should be penciled on the back of each figure. Legends should be typed
consecutively (double-spaced) on a separate page. Drawings should be drafted with undiluted india
ink, and be large enough to permit ½ to ½ reduction to the size that they will appear in print.
Graphs may be drafted on coordinate paper ruled with light blue lines; do not use coordinate paper
ruled with green lines. Use mechanical lettering, pressure transfer letters, or calligraphy; typewrit-
tened lettering is not acceptable. Lettering should be large enough to be easily readable after 50%
reduction of the figure, but not overly large. Lettering style should be uniform among all figures
for a manuscript, as should the size of lettering following reduction. Photographs should be glossy
prints of good contrast and sharpness, and should be approximately the same size as they will
appear in print. Letters and arrows on photographs are best applied by pressure-sensitive materials.
The Auk is published in a double-column format; give careful attention to designing your tables
and illustrations accordingly.

Literature citations for all manuscripts are listed (double-spaced!) in a Literature Cited section
following the text and Acknowledgments. Text citations should include author and year (e.g.
Darwin 1858), or, if more than two authors are involved, the first author and year (Jones et al.
1947). If critical matter is cited or quoted directly from longer works, indicate the pertinent pages
(e.g. MacArthur 1972: 204). Citations of two or more works on the same topic should be cited in
chronological order (e.g. Meanley 1971, Dyer 1975). For abbreviations and forms of titles of serial
publications, follow the BIOSIS List of Serials. Consult recent issues of The Auk and the CBE Style
Manual for additional details.

A more detailed set of instructions for contributors appeared in the Auk, Vol. 99, No. 1 (Jan-
uary 1982), copies of which are available from the Editor.
we can continue to make progress if...

... members and friends of The American Ornithologists’ Union support the organization as generously in the second century of our existence as our predecessors did in the first century.

Join the Second Century Campaign so we can continue our support of research, publications, graduate student travel to annual meetings, and other vital activities at a level which will provide the ornithological expertise our world needs in the decades to come.

Consider the alternative.
