

sorted somewhat as to subjects and authors. The volumes are numbered consecutively and the papers of each volume are numbered. Any paper is found by means of a card index giving number of volume and number of paper. If a volume contains papers by one or a few authors their names may be printed on the back, as well as the general subject treated in the volume, and at the bottom the name of owner. The first three volumes of such a series might have backs marked as follows:

MEXICAN BIRDS	EVOLUTION	FISHES
I	2	3
<i>Brewster</i>	<i>Cope</i>	<i>Everman</i>
<i>Nelson</i>	<i>Jordan</i>	<i>Garman</i>
<i>Ridgway</i>		<i>Gill</i>
SMITH	SMITH	SMITH

This method commends itself by reason of the facts, that the papers are well protected, a volume is not so easily mislaid as a small pamphlet, and the pages having been cut in binding, are more easily run thru in order to locate a given paragraph. This method is more expensive than the first, but the greater convenience is well worth the additional cost.

I have given the two systems a pretty thoro test side by side, working with one set of papers bound and another equal number of papers unbound, and for convenience the bound volume is away ahead of the bunch of loose papers.

I hope the above notes will call forth additional remarks on the subject.

Manila, P. I.

FROM FIELD AND STUDY

Birds Whose Notes Are Imitated by the Western Mockingbird.—For the past three years I have made observations on the song of the western mockingbird in the vicinity of Pasadena and find in every instance that they imitate the commonest and most noisy birds of the locality. A striking proof of this was noted on Santa Catalina Island in the early part of last April. The western flycatcher was very numerous and in full song and as a result the mockingbirds of the Island were imitating it freely, something I have never known a mainland mockingbird to do.

In addition to the notes of other birds, the mockingbird utters several scolding notes which are strictly its own, but these are seldom heard in the regular song. There are quite a number of notes which I have been unable to place as yet. However, I think the following list will convey an approximate idea of the birds mimicked by *Mimus polyglottos leucopterus* in this region.

Western gull (Santa Catalina Island), killdeer, valley partridge, sparrow hawk, California woodpecker, red-shafted flicker, ash-throated flycatcher, Say phoebe, black phoebe, western wood pewee, western flycatcher (Santa Catalina Island), California jay, western meadowlark, Arizona hooded oriole, Bullock oriole, Brewer blackbird, San Diego song sparrow, black-headed grosbeak, western tanager, western martin, cliff swallow, phainopepla, California shrike, western gnatcatcher, dwarf hermit thrush, western robin.—C. H. RICHARDSON, JR., *Pasadena, Cal.*
