OnIy when the ringor is about 10 n fron the trap doos the bird paric and start to flap about, so tho last fow rotros should bo covorod quickly and tho bird subdued.

20-25 ninutes was the usual trapping tine though 4 minutua a rucord. If the bird is not showing signs of untry afiter 20-25 minutos (i.c. not concentrating its activitios at the trap ontrance), the trap must bu renoved, and 30 minutus must bo rogarded as a maximua for the bird to bo kupt off its oges. Soretinus the drive to incubato will be low (0.g. bofore a clutch is complete or in hot weather) and one must accopt failure."

In my oxperionco, thore are tronendous variations in the rosponses of individual birds to traps at the nost, sono kooping soveral metros away, while others walked in innediately. Sone birass showed different extrones of behaviour on differont days. In some cascs it was cloar that a bird would onter the trap only by walking diroctly towirds the nost which, thoroforo, had to be in line with the entranco. hs Harry Green and Poter Forns pointed out earlicr, this problon may bo overconc by approaching the trap fron the same site as the ontranco from as close a position as conconnent will allow. Probebly the answer is to recognise the difforences in individunls and b: proparod to try several trap positions as woll as difforent mapping mothods (soc carlior articles), aftor a long inturval to allow incubation to bu re-established.

Finally, in roply to yot anothor query, it should bo strussed that, whatever nothod is used, the nost and trap muste bo kept under continunl observation during the trapping attompt.

Mike Fionkowski

## WADER NETS

The first Knox wador nets mado from material half as thick (and strong) again as nomal nist nets arrived at Beech Grove in Moy. Ono was imediatoly erocted on the lawn and proved to be vory woll finishod with an inmonse anount of slack and good strong, inclastic sholf-strings. Tho main problen with thesc 3-sholf nots may be the hoight to which they will sot - wi.th taut side strings the netting is about ton foot high and the pockets have a ronlly good anount of bag. Anyono with short poles (or tall wator) should bewaro.

Coments from ringers have beon favcurable. Evon those approntly wodded to les filets Francais havo probably boen convincod on the grounds of quality, price and availability to buy British. Rathor fuw 12 n nots wore sold but nost of the 18 m nets fron the first production run of notting have now gonc. If you want to rosorve ono (or nore) write quickly. Knox have boen asked to nake more matorial but, at the norent, they cannot give a definite delivory dato - thoy will be encouragod to produco it quickly.

Since the nets aro made fron singlo sholf longths joinod by tho sholf-string the nots may readily be loworod into 2 -shelf (or sincle sholf) format. Whon the next lot of netting is availeble we will cortainly be offoring un-nado-up single sholf nettinc. Ploase lot ne know if you fecl strongly about what you would want:
a) neatly packagod loose longths with oxactly tho right, nuntur of meshos to rake a sholf of each length of made up net ( 12 n and 10n)
b) accuratoly cut Luntins of any other aizo
c) continuous skeins that the N.O. cuts to approxinate longth.

I would personally opt for a) - casicr for the salcs staff hore at Booch Grove and should moke cortain that the bits bought will fit into mado-up nots if anyone is cutting down (or up) or ropairing.

Chris Mead

## PHHT NETS

The Rin ing and Migration Comittoce have ducided that in jnitiol when of 20 sets of Phiting gear and the assosiated nots should be offorod for sale to soloctod ringers who:
n) can pay for the apparatus - probably $£ 40$ or so pur net.
b) have experience in usine connon-ncts or leres clap-nots.
c) will uso the equipront and roport back on their expuriences.

Then full regulations as to how this new tochniquo will be rogulatod will bo discussed and publishod by tho Conrittico.

An articlo appears in the July issue of the Ringer's Bullotin and I would expect that many of the ringers who will bo selocted to have the phits will bu monbors of the wador study eroup. I personally oxpoct then to bo a reat success and fully oxpect thon to create nlnost as wuch of a boost to the copture of solected wadurs as cannon nets woro a decado aro. Thoy are iso casy to use and only need 2 rathor srall tom of oxporioncod pooplo to harule and process the birds cought.

Chris Micad

## REQEST FOR JACK SINIPE DATA

A study is being undortaleon on Jack Snipc. Data on bionctrics, woult, ringine recoverios, nigration and diurnel/nocturnol activity pattorns otc are all required, ospecially from Scandinavis but also fron other arons. Any information will be welconed by Frank-Ulrich Schnidt, Wolfshof S, 3410 Northeiri, West Germony.

## GREENLAISD COLOUR DYEING

Hans Meltofto has been spending the sumer of 1976 in NE Grounland and he loa beon colour dycing the following species - Ringod Plover, Turnstore, Knot, Duntin and Sanderling. If any of these birds are seen will you plense sond details including - date, place, species, colour, which marts wf the body coloured, rings cte. to oithor Hans Meltofto, ibllogade 23, 3tv., DK 220, Copenhagen H, Denaark or Ticuy Prater, BTO, Becch Grove, Trinf, Ilerta.

## SOUTH APRICAN COLOUR DYEING

This schone announcod previously has rosulted in at luast one lons distance sighting of a Curlow Sandpiper in Ethiopia. We bupo for aore sightins.

## WADER IUMBERS IN SOUTH AFRICA

During Deconber 1975 and Janunry 1976 the Wostern Cape Wader Study Group organised extonsivo counts of coastal waders fron Olifonts liver ( $31^{\circ} 301 \mathrm{~s}$, $18^{\circ} 10^{\prime} \mathrm{E}$ ) to Kingsne Lagoon ( $34^{\circ} 00^{\prime} \mathrm{S}, 23^{\circ} 30^{\prime} \mathrm{E}$ ). They hevo producod o dotailed 162 pago roport on thoso counts. The roport hra thruo major scetions, the first sumarises numbers and distribution of waders in this part of south Africe, the second considors the consorvation importance of the aroas and the third part of 112 pagos includes the dotailed data on cach locnlity. Acong the birds observed there were almost 55,000 Curlew Sardpipurs, 15,000 Sanderling, 9,100 Tumnstonc and 6,000 Little Stint and tho principal aroas were Langebann Lagoon with 36,800 and Berg estuary with 19,000 wadurs. Copios of this report are obtainable fron M Waltnor, 5 fontag Why, Pinelands, 7405, Cape Provinco, South Arrica, prico R2.00 (pluso chocl. current exchange rates!)

## RTPPORTS OF WADER STUDIES IN MOROCCO 1971-72.

Duc to continued domand, copios of the "University of East Anclin Jwpodition to Morocco 1971 Roport" are no longer available for sale. A fow copios have been retainod and are available on loan (from M W Pionkowski), provided that the borrower pays postage in both directions. There are, of coursc, no objoctions to the making of photocopies of tho Report.

It is regrettod that it has been necessary to increase the price of the joint roport of UEA Expedition to Tarfaya Province, Moroceo 1972 and the Caabridge Sidi Moussa Expodition 1972: "Studios on coastal birds and wetlands in Muroceo 1972" (see WSG Bull. 16) fron $£ 1.00$ to£2.00 por copy. 'ilhis nou includes postage. The incronse fron the prico advortisud prior to publication is due to inflated production costs and continunlly rising postill chargos. All orders roceivod at the oarlior price hevo boon mut. Copjes aro available fron M W Pionkowski (address on page l).

## TUNISIAN RINGING SChENT

Wo are pleased to inform you that tho ornithological notivjetios in Tunioia continue to run undor the auspices of the Institute of Scientific and Tochnical Rosearch. MIso, in the intorost of action that is taking place, potential visitors are oncournged to contact the local ornitholocist at the following address: Michel Alcxandre Czajkowski
c/o M. Hadj Taicb ol Baouab, 4. Tue Ali Blahourne,

La Morsa, Tunisia.

## RINGING OYSTERCATCHERS

Oystercatcher rings are large enough for the number to be read in the field. We have learned that there is a study in prorress in Norway on this specios and an attempt has been made to read all rings in the study area. Unfortunately at least two rings have been put on upside down making them very difficult to read. We hope that all ringers ringing birds of Redshank size and above will try to put rings on the correct way up to aid anyone roading ring numbers in the future.
