

RECENT RECOVERIES OF WADERS RINGED IN BRITAIN AND IRELAND

Compiled by Nigel and Jacquie Clark from data provided by the British Trust for Ornithology. Because of the large number of recoveries to hand since our last list, this list has to be rather selective. For the more rarely recorded species, all records are given. For others, except Oystercatchers, all movements of over 100 km are detailed. Birds recovered more than 3,000 days after ringing are detailed unless otherwise stated.

Symbols: Age is coded according to EURING code, v = caught and released (i.e. controlled), vv = ring number or colour marks (dye or rings) read in the field, + = shot or killed by man, x = found dead or dying, ? = manner of recovery unknown. Co-ordinates are generally given only when the locality is first mentioned.

Oystercatcher *Haematopus ostralegus*

As well as the recoveries listed there were 19 birds ringed on the Wash and recovered in the breeding season in Norway. For all the recoveries not listed in full the durations are as follows: <500 days 5, 500-999 days 4, 1,000-1,999 days 10, 2,000-2,999 days 9, 3,000-3,999 days 0, 4,000-4,999 days 2, 5,000-5,999 days 2.
