

RECENT RECOVERIES OF WADERS RINGED IN BRITAIN AND IRELAND

compiled by Nigel and Jacquie Clark

The following lists are compiled from data provided by the British Trust for Ornithology, from whom permission must be sought before using these data in publications. As usual, space does not allow us to detail all records in full. For the more rarely recorded species all records are given. For others, except Knot and Oystercatcher, all movements of over 100 km and recoveries of more than 3,000 days after ringing are detailed.

Symbols Age is coded according to EURING code. v = caught and released (i.e. controlled), vv = ring number or colour marks (dye or rings) read in the field, + = shot or killed by man, x = found dead or dying, ? = manner of recovery unknown. Co-ordinates are generally given only when the locality is first mentioned.

Oystercatcher *Haematopus ostralegus*

For recoveries not listed in full the durations are as follows: <500 days 26, 500-999 days 12, 1,000-1,999 days 9, 2,000-2,999 days 10, 3,000-3,999 days 10, 4,000-4,999 days 3, 5,000-5,999 days 2.
