## RECENT RINGING TOTALS

compiled by Robin M. Ward

Tables 1 and 2 list the ringing totals that we have received for the period January to December 1988 inclusive. In addition, since the publication of the ringing totals listings for 1985, 1986 and 1987 we have received some additional listings for those years. These additional records are listed in Tables 2, 3 and 4.

The nomenclature and systematic order used in the tables follow Hayman et al. (1986). Totals given in parentheses are for chicks, where these were reported separately from fully-grown birds.

So far these annual ringing totals are dominated by submissions from Western Europe. It is thus very encouraging to be able to list here reports from new contributors from eastern Europe, the Middle East and North America. Nevertheless the listing is certainly still very incomplete, especially for North America and we would like to encourage all members worldwide who catch and ring waders to send us their ringing totals.
