The population history of Grey Plovers *Pluvialis squatarola* in the Solent, Southern England

by Colin R Tubbs

Figure 6 was missing from page 20

Figure 6. A possible population history of Grey Plovers *Pluvialis squatarola* in The Solent (and elsewhere?)

Erratum to *Bulletin* 62

The Northern Dunlin Puzzle by Hans Meltofte

page 16 - 3rd paragraph should read;

2. Dunlins, whose core wintering area is in France, move to the Dutch Wadden Sea around 1 April and then further into the northern part of the Wadden Sea and the Danish coasts in late April and early May. From here they fly to the breeding grounds in mid or late May. This breeding area is east to around the Ob river in northwestern Siberia, whilst the western boundary with the previous sub-population is unknown.
