ANNOUNCEMENT

QUEBEC RED-SHOULDERED STUDY

In the spring of 1980, the Macdonald Raptor Research Centre of McGill University initiated a Red-shouldered Hawk banding and marking project in the south-western region of Quebec to determine dispersion, migratory movements and recruitment.

Birds are being banded with red, white, blue and yellow (and combinations thereof) plastic bands and standard FWS bands. We would appreciate any sightings of these birds. Observers are asked to note the band colours and their relative positions on the legs, as well as the location of the sighting.

Please report this information along with your name, address and phone number to the Bird Banding Laboratory, Laurel, MD 20811 with a copy to BRENDA PENAK AND DAVID BIRD, Macdonald Raptor Research Centre, Macdonald Campus of McGill University, Ste. Anne de Bellevue, Quebec H9X 1C0
