

Regional Reports Pictorial Highlights Summer 1987

Adult Rufous-necked Stint at Bombay Hook N.W.R., Del., July 25, 1987. Photo/Bob O'Brien.

One-year-old Mississippi Kite south of Leesburg, Loudoun Co., Va., June 7, 1987. Apparently the first documented Virginia record (after several sight records). Photo/Ken Howard.

Adult Black-necked Stilt, one of the birds that nested at Deal Island W.M.A., Md., June 28, 1987. Photo/Michael O'Brien.

Audubon's Shearwater off Oregon Inlet, N.C., June 1987. Not a rare species, but rarely photographed so well. The face pattern, underwing pattern, and long-tailed effect are all evident here. Photo/Mike Tove.

Adult Masked Booby off Oregon Inlet, N.C., July 25, 1987. Photo/Bob O'Brien.

Immature White Ibis in St. Clair County, Ill., July 31, 1987. Photo/Joe B. Milosevich.

Flightless young Snowy Egrets photographed at Minnewaukan Flats June 28, 1987, for the first documented nesting in North Dakota. Photo/David O. Lambeth.

Immature Roseate Spoonbill at Oklahoma City, Okla., July 25, 1987. Photo/Jeri McMahon.

Fan-tailed Warbler in Sycamore Canyon, Ariz., June 7, 1987. About the fourth report for the United States. Photo/Dave Krueper.

White-eared Hummingbird (female or immature male) on Mt. Lemmon, Santa Catalina Mts., Ariz., August 1987. Compared to Broad-billed Hummingbird, this genuine White-eared shows a shorter bill, bolder white "ear" stripe, and a pattern of green disks on white underparts. Photo/Rick Bowers.

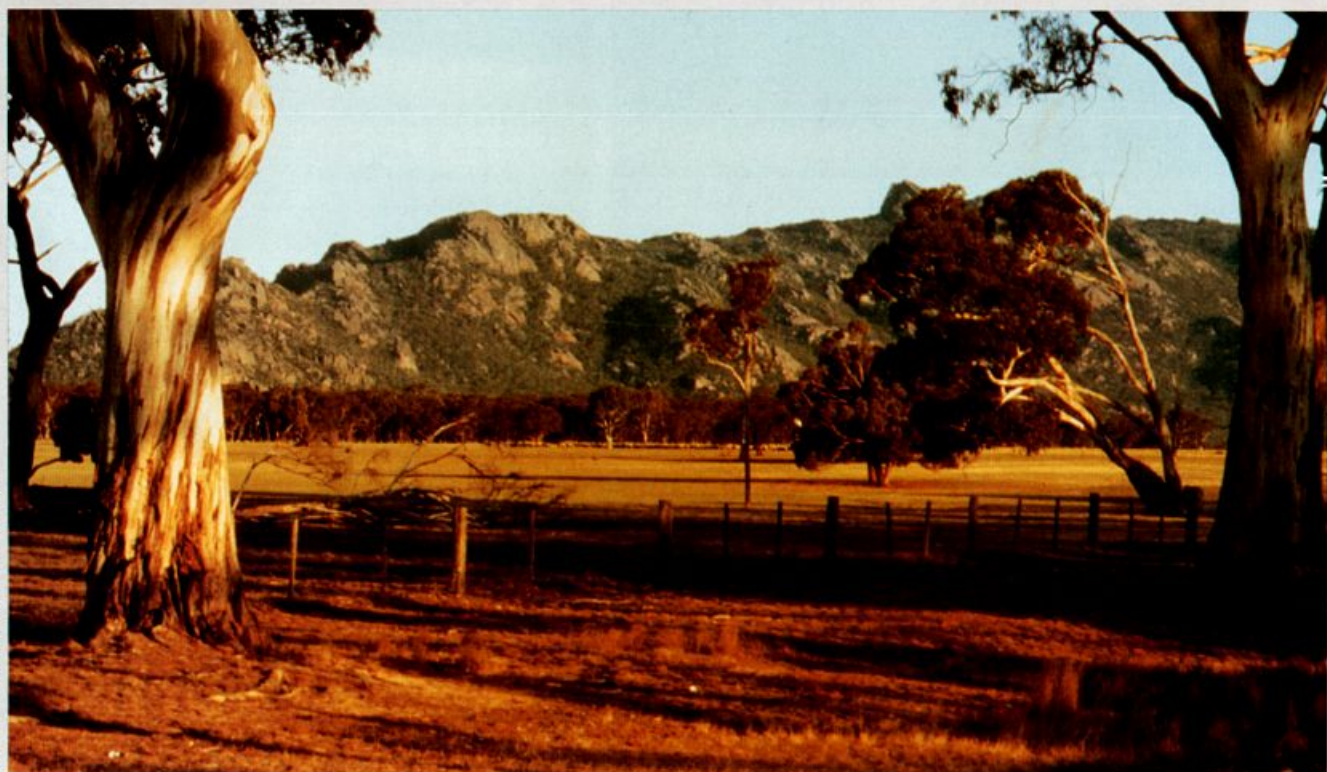

Hawfinch at Adak Island, Alaska, June 21, 1987. Photo/Daniel Niven.

Terek Sandpiper at Sooke, B.C., July 21, 1987. Notice the recurved bill, short legs, and relatively plain plumage pattern. First documented record for Canada, and first North American record south of Alaska. Photo/Tim Zurowski (VIREO z03/6/003).

*Queensland Is for Koalas...
kookaburras, cockatoos,
and honeyeaters*

Photos: Australian Tourism Commission

1988 is the year of Australia—the most popular foreign destination for naturalists, bird watchers, and tourists.

Queensland has the most varied habitat in Australia—the Great Barrier Reef, lush tropical jungles, the outback, the great dividing range of mountains, and some of the most beautiful beaches in the world.

You'll spend time looking at birds, koalas, wallabies, and crocodiles in Queensland with MOT's leisurely tour, led by the past president of the Queensland Ornithological Society. You will snorkel in the Great Barrier Reef, overnight in the outback, boat in the tropical jungles of Daintree National Park, and stalk the Lyrebird and Crimson Rosella in the forests of Lamington National Park.

Your host will be a Cornellian who will look after your every need. Please join us in Australia in August and September.
