Regional Reports Pictorial Highlights Spring 1990

Prothonotary Warbler at Wheat Ridge, Colorado, May 20, 1990. Photograph/ David Leatherman.

A spring overshoot, well north of its breeding range, was this Chuck-will's-widow at Marblehead, Massachusetts, May 12, 1990. Photograph/Torrey Jackson and Phil Tremblay.

Male Garganey near Bismarck, North Dakota, on May 12, 1990. First state record. Individuals of this species were widely scattered over the continent this spring. Photograph/Dave Angell.

Fork-tailed
Flycatcher at
Concord, Massachusetts,
May 2, 1990.
Spring records of this
South American visitor in
North America are far
less frequent
than fall records. Photograph/Simon
Perkins.

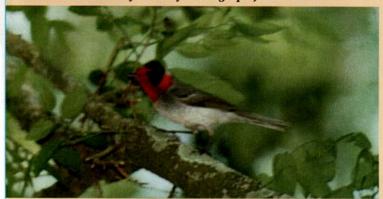

Reports of bitterns were up slightly in the Appalachian Region this season. This female Least Bittern was at Presque Isle State Park, Pennsylvania, on May 27, 1990. Photograph/Ed Kwater.

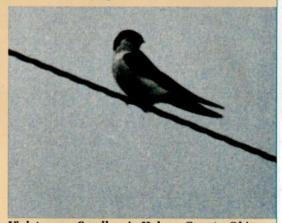

Whiskered Screech-Owl in Cottonwood Canyon, Peloncillo Mountains, New Mexico, March 13, 1990. The species may have colonized this area only recently. Photograph/James Black.

This hybrid duck at Saint-Zacharie, Quebec, on April 27, 1990 presented a mystery. Green-winged Teal was clearly one of the parent species, but it was not immediately evident what the other parent species could have been. Photograph/Mario Scrosati.

The first Red-faced Warbler ever recorded in the Central Southern Region. This vagrant dazzled over 200 observers in Cameron Parish, Louisiana, April 27-30, 1990. Photograph/Dave Patton.

Violet-green Swallow in Holmes County, Ohio, May 16, 1990. First state record, and one of very few for the east. Photograph/Bruce Glick.

Vision from the Arctic: this Ross' Gull that visited Baltimore, Maryland, in March and April 1990 was one of the southernmost ever recorded. Photograph/George M. Jett.

Correction
A photograph caption, of an Elegant
Trogon sited in Texas, appearing in the
Regional Reports Pictorial Highlights,
Summer 1990 issue (Volume 44, Number 2), omitted the photographer's
name, Jim Flynn. We apologize to Mr.
Flynn for the deletion.

Adult Little Egret at Hampton Falls, New Hampshire, April 29, 1990. Second for the United States. The feathers are being raised by the wind, showing off the two very long single head plumes that are thought to be diagnostic for this species. Photograph/Steve Mirick.
