

Western Regional News

Western Bird Banding Association

Founded 1925

1990 ANNUAL MEETING

The meeting will be hosted by the Beaverhill Bird Observatory in Alberta, CANADA, August 24 - 26, 1990 August--a delightful time to be in Alberta. Watch for further details in future issues of NABB.

MONOGRAPH AND BACK ISSUE SALES

Barbara A. Carlson was appointed Assistant Treasurer in charge of sales. Please send all orders for monographs and back issues to her at: P.O. Box 55419
Riverside, CA 92517

IT'S DUES TIME

Please save WBBA money and the Treasurer headaches and insure that you will not miss any issues of North American Bird Bander by paying your dues when you receive the notice. Thank you.

ANNUAL REPORT

A summary of banding reported from the WBBA area for 1988 with USFWS/CWS bands.

Compiled by Coyote Creek Riparian Station, P.O. Box 1027, Alviso, CA 95002.

Codes in the HIGH BANDERS column refer to the list of individual or institutional banders. Numbers in () are individual totals. Where no number is included, that individual banded the total for that species.

The AK/CANADA column includes birds banded in AB, BC, NWT, and AK.

NAME	AK/ CANADA	AZ/NM/ MX	CA	HI	NV/ID/ MT	OR/WA	WY/CO/ UT	TOTAL	HIGH BANDERS
COMMON LOON	3					1		4	C7(3), E2

Commentary on the 1988 Annual Report

Michael Rigney
Coyote Creek Riparian Station
P.O. Box 1027
Alviso, CA 95002

A total of 479 banding reports was received for 1988, including 22 reports from subpermittees and 165 individuals or organizations who reported no banding with USFWS/CWS bands in the WBBA area. The number of active reports, 313, up slightly from 1987 and the 5-year mean (1983-1987) of 284.6 (see Table 1 below). This year's total of active banders reporting ranks third in the previous ten years (2 years tied with 361 active reports in 1979 and 1982). In fact, the number of active banders (or those who report bandings) in the WBBA area has steadily increased since it reached a 10-year low in 1983.

The number of birds banded in the WBBA area 178,020 reflects an increase of nearly 10,000 over last year's total and a 17% increase over the 5-year mean.

1986 since the devastating El Nino years of 1982 and 1983 (see Figure 1). The total number of full species banded (406) on the continent was down from the record-setting 1987 total of 414. We are, however, apparently continuing the trend of increasing numbers and species banded as noted by Desante (NABB vol. 13 no. 3) last year.

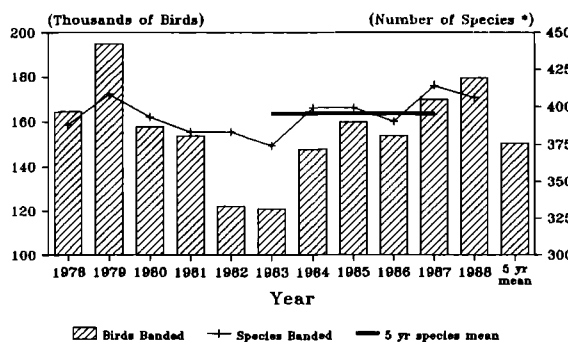

The number of birds banded per active bander in 1988 (567) is above the 1987 figure (555) and well above the 5 year mean of 528. In looking back over the previous ten years of banding activity it is interesting to note the higher figures achieved by banders in 1978-1980. Could this have been a recovery of populations following the "great western drought" of 1976-1977? The mean num-

Table 1. Ten-year summary of banding activity in WBBA area

	1979	1980	1981	1982	1983	1984	1985	1986	1987	5 yr mean 83-87	1988	10-yr Aver. 79-88
Number of active reports	361	282	314	361	238	276	299	304	306	285	313	306
Species banded*	408	393	383	383	374	399	399	390	414	395	406	395
Average species/bander	12	12	11	11	14	13	14	13	12	13	13	13

Only 1979 had a higher total number of birds banded in the past ten years. The number of birds banded has steadily increased (except for a slight decrease in

ber of species banded per active bander (12.7) was comparable to the previous years' figures. It is also interesting to note, however, that 60 banders (19% of active banders) banded only one species while 40 (13%) banded 25 species or more.

* Continental birds, full species only

Figure 1. Graphic representation of bird and species totals for the past ten years in the WBBA area.

Major banding efforts in the Hawaii-Pacific Islands region and Alaska-Western Canada produced record high totals of 11,431 birds and 47,794 birds, respectively. California bandings were down slightly while most of the other regions in the WBBA area remained fairly constant.

Table 2 provides an analysis of bandings over the past five years as function of general types of birds banded. Waterfowl continue to be banded in large numbers with 1988 totals surpassing any of the previous five years. Mallards accounted for 58% (31,242) of the total for all waterfowl (53,573). A new record number (at least within the last five years) of raptors were banded in 1988 far above the previous high recorded in 1985.

Table 2. Number of Birds Banded (% of Total) for Groups of Species

	1983	1984	1985	1986	1987	5-yr mean	1988
Waterfowl (Anseriformes)	32516 (26.9)	41785 (28.3)	36482 (22.8)	40151 (26.1)	52577 (31.0)	40702 (27.0)	53573 (29.9)
Birds of Prey (Falconiformes & Strigiformes)	5243 (4.3)	6050 (4.1)	7478 (4.7)	6488 (4.3)	7366 (4.4)	6525 (4.3)	9590 (5.3)
Shorebirds, Gulls & Alcids (Charadriiformes)	8247 (6.8)	10588 (7.2)	17270 (10.8)	7262 (4.7)	13104 (7.7)	11294 (7.5)	14300 (8.0)
Pigeons & Doves (Columbiformes)	9494 (7.9)	15365 (10.4)	5332 (3.3)	2936 (1.9)	3009 (1.8)	7227 (4.8)	3175 (1.8)
Passerines (Passeriformes)	54440 (45.0)	62922 (42.6)	79548 (49.8)	79092 (51.5)	79906 (47.0)	71182 (47.3)	83103 (46.3)
Wood-warblers (% of passerines)	4776 (8.8)	5697 (9.1)	6074 (7.6)	6746 (8.5)	5105 (6.4)	5680 (7.9)	6082 (7.3)
All Other Birds	10996 (9.1)	11095 (7.5)	13728 (8.6)	17725 (11.5)	13731 (8.0)	13455 (8.9)	15585 (8.7)
TOTAL	120936	147805	159838	153654	169683	150385	178020

Notable numbers of Sharp-shinned and Cooper's Hawks were banded in 1988 and the intense interest in the Spotted Owl produced record numbers of that species as well.

Banding of Charadriiformes in 1988 was again above the previous 5-year mean in absolute numbers as well percent of total birds banded and second only to 1985 totals. Bandings of pigeons and doves were again well below the 5-year mean and up only slightly in absolute numbers from last year. There appears to be a continuing decline either in interest on the part of banders to focus on columbiformes populations or a genuine decline in western populations.

A six-year record high number of passerines was banded in 1988 although the percent of total birds banded was lower than the 5-year mean and lower than many of the previous years' percentages. Most of the questions raised by DeSante in last year's commentary relating to population trends, whether real or artifacts of banding effort, remain unanswered. Wood-warbler numbers increased from 1987 to 1988 although this group's representation (as a percentage of overall passerines banded) remained relatively low.

In summary, banding in the WBBA area appears to be rising again to the levels of the late 1970's both in

terms of numbers of active banders and numbers and types of birds banded.

Dave DeSante, in last year's commentary, pointed out the necessity of "rigorously standardized" banding studies to determine if perceived trends in banding statistics are related to actual population trends in birds. This year as I look at the steadily increasing numbers of banders and birds banded I cannot help but wonder if this is not, in part, a result of an intense effort (including providing self-addressed stamped envelopes) to get banders to contribute their data to the annual report. I hope that if this is indeed a real upward trend we will see more publications of banding results and more focus on long-term biomonitoring programs such as those being pursued by several North American bird observatories.

I would like to thank CCRS members Pat Gordon, Dick Mewaldt, Fran Mewaldt, Syndie Meyer, Helen Le, and Craig Kuziel for their diligent efforts in data entry and editing. Bob Johnson, of B.C. Software, developed the R-BASE application program which was so valuable for data entry.

This is CCRS contribution number 2.
