⁴ Universidade de Brasília, Departamento de Ecologia, Brasília, DF, 70910-900, Brasil.

Key words: Body mass, birds, central Brazil, cerrado, savanna.

Few comprehensive reports have been published on the body masses of birds from the cerrado region of Brazil (Fry 1970, Cavalcanti & Marini 1993). Other less detailed reports on bird masses from the cerrado region include Sick (1958) and Oniki (1980, 1990). Most literature on Brazilian bird masses are from Amazonian localities (see references in Cavalcanti & Marini 1993). As pointed out by Wilson (1975) and Karr *et al.* (1978), body masses are valuable in testing several ecological and evolutionary hypotheses.

Here, we present the masses of 878 specimens of birds belonging to 103 species (Table 1), mist-netted or collected during field work in 11 localities in the cerrado region of central Brazil between 1984 and 1994. The cerrado region is covered by a variety of vegetation types, ranging from grassland (campo) to dense savanna (cerradão) and gallery forests. More detailed description of cerrado vegetation can be found in Eiten (1972). Birds were mist-netted or collected in: (1) Distrito Federal, mostly at Fazenda Água Limpa (DF) (15°57'S, 47°56'W), as well as several other sites; (2) Fazenda Salto e Ponte (SP), Prata (19°12'S, 48°08'W), (3) Fazenda Zebu Ecológica (ZE), Uberaba (19°45'S, 47°55'W), (4) Paracatú (PA) (17°14'S, 46°52'W) and (5) Santa Fé de Minas (SF) (16°45'S, 45°30'W), in Minas Gerais state; (6) Minaçú (MI) (13°30'S, 48°15'W), (7) Silvânia (SJ) (16°35'S, 48°45'W) and (8) São João da Aliança (SJ) (14°46'S, 47°30'W), in Goiás

state; (9) Represa do Rio Manso (MA) (14°45'S, 56°W) in Mato Grosso state; (10) campus of Federal University of São Carlos (FU) (21°58'S, 47°52'W) and (11) Fazenda Água Branca (AB), São Carlos (22°10'S, 48°10'W), in São Paulo state. Locality abbreviations as above are in brackets after bird masses. Habitats sampled include cerrado *sensu strictu* and *sensu lato*, secondary cerrado, gallery forest, and man-made environments such as pastures and cultivated fields.

Body masses were taken with Pesola and Accu-Weigh spring scales to the nearest 0.1, 0.5 and 1.0 g. For sample sizes of 10 or more we give the mean ± standard deviation, range and sample in parenthesis. For samples smaller than 10, individual masses are provided, and numbers in parentheses are the sample sizes for a particular mass value. All body masses are from adult specimens, unless otherwise indicated. Age and sex abbreviations are: J, juvenile; S, subadult; M, male; F, female; I, indeterminate. Double letters represent more than one specimen.

The list includes masses of birds endemic or "near-endemic" to the cerrado region (cf. Cra-craft 1985, Cavalcanti 1988), such as *Hylocryptus rectirostris* (= *Automolus rectirostris*), *Herpsilochmus longirostris*, *Melanopareia torquata*, *Antilophia galeata*, *Cyanocorax cristatellus*, *Basileuterus leucophrys* and *Saltator atricollis*. The list mainly

Table 1. Body masses of birds from the cerrado region. Abbreviations as in the text.

Species	Sex	Body mass [locality]
<i>Buteo magnirostris</i>	M	248.0 [PA] 277.0 [AB]
<i>Columbina talpacoti</i>	M	40.6, 46.0 (2) [DF]; 50.0, 43.0 [FU]; 46.0, 48.0, 48.2 [MA]
	F	37.0, 53.0 [AB]; 38.0 [DF]; 54.0 [MA]
	I	40.2, 45.1, 45.5, 46.5 [DF]; 34.5 [MA]
<i>Leptotila verreauxi</i>	F	142.5 [DF]; 158.0 [SI]

contains widely distributed species, which are common also in the cerrado region. Scientific nomenclature follows Meyer de Schauensee (1970), and recently revised taxa are indicated in parenthesis according to Willis & Oniki (1991).

ACKNOWLEDGMENTS

M. Â. Marini and R. B. Cavalcanti were supported by grants and fellowships from CNPq and Capes. J. C. Motta-Junior and L. A. S. Vasconcelos wish to thank FAPESP and CNPq for financial support. Logistical and financial support was provided by Faber-Castell in Prata, Minas Gerais state. The University of Brasília provided support for several field trips in Distrito Federal. Logistical support was provided by SAMA S. A. in

Minaçú, Goiás, and by Eletronorte in Rio Manso, Mato Grosso state. IBAMA provided banding and collecting permits.
