

Wilson Bull., 107(4), 1995, p. 765

Additional records of owls and wood warblers from México.—In the collection of birds of the Laboratorio de Ornitología, Facultad de Ciencias Biológicas, Univ. Autónoma de Nuevo León (UANL), and Allan R. Phillips (=ARP), we have seven specimens of two species of owls and four species of wood warblers, representing new records for Nuevo León and Aguascalientes. Recently Enriquez-Rocha et al. (1993), in a revision of the distribution of owls in México, included 27 species that occur in all states. They recorded 3683 specimens from museum collections. The wood warblers of Nuevo León, as reported by Miller et al. (1957) include 26 species. Martín del Campo (1959) listed 16 species, and Contreras-Balderas (1973) added Black-throated Gray Warbler (*D. nigrescens*). The new records and their states are:

Burrowing Owl (*Speotyto cunicularia*).—UANL 880, (male). El Milagro, Aguascalientes, Aguascalientes. 11 September 1981. This record is the fifth species of owl from Aguascalientes.

Short-eared Owl (*Asio flammeus*).—UANL 28, El Mezquital, Apodaca, Nuevo León. 18 December 1969. This record increases to 14 the species of owls known from this state.

Yellow Warbler (*Dendroica petechia*).—UANL 506, (adult female). Manantial Las Blancas, 2.5 km E of Mina, Nuevo León, México. 4 September 1971. UANL 1302. (adult male). Parás, Nuevo León, México. 13 May 1985.

Black-throated Blue Warbler (*D. caerulescens*).—UANL 239, (adult male). Las Huertas, Cañon de Meleros, Santa Catarina, Nuevo León, México. 29 December 1971. (Now Delaware Museum of Natural History, DEL 30325).

Prothonotary Warbler (*Protonotaria citrea*).—ARP 11095, (adult male). Presa La Boca, Santiago, Nuevo León, México. 21 May 1977.

Northern Waterthrush (*Seiurus novaboracensis*).—UANL 509, (immature female). Ojo de Agua de Lampazos, Nuevo León, México. 11 September 1971.

The record for *D. caerulescens* is the first report for continental México, previous records being from Isla Cozumel to Central America. Wauer (1973) found this species in west Texas and Oberholser (1974) includes a few more localities from Texas.
